the management of and attitudes toward children and adults with down syndrome have undergone considerable changes in the course of the condition's long history zellweger 1977 1981 zellweger patil 1987 j e d esquirol 1838 and e seguin 1846 were probably the first physicians to witness the condition without using currently accepted diagnostic designations seguin coined the terms furfuraceus or lowland cretinism in contradistinction to the goiterous cretinism endemic at that time in the swiss alps esquirol as well as seguin had a positive attitude toward persons who were mentally ill or mentally subnormal esquirol pioneered a more humane treatment in mental institutions and seguin created the

first homes in france and later in the united states aimed at educating persons who were mentally subnormal the term mongolian idiocy was coined by j h l down in england 1866 the term is misleading in several respects 1 down identified the epicanthic folds seen in many children with down syndrome with the additional skin fold in the upper lid occurring particularly in people of oriental mongolian descent and 2 down also erred by assuming that down syndrome represented regression to an ethnic variant of lower cultural standing such an interpretation might have been understandable at a time when the myth of anglo saxon superiority was widely accepted by the british charles darwin s then highly acclaimed theory of origin of the species may have contributed to such a concept

what is combinatorics anyway broadly speaking combinatorics is the branch of mathematics dealing with different ways of selecting objects from a set or arranging objects it tries to answer two major kinds of questions namely counting questions how many ways can a selection or arrangement be chosen with a particular set of properties and structural questions does there exist a selection or arrangement of objects with a particular set of properties the authors have presented a text for students at all levels of preparation for some this will be the first course where the students see several real proofs others will have a good background in linear algebra will have completed the calculus stream and will have started abstract algebra the text starts by briefly discussing several examples of typical combinatorial problems to give the reader a better idea of what the subject covers the next chapters explore enumerative ideas and also probability it then moves on to enumerative functions and the relations between them and generating functions and recurrences important families of functions or numbers and then theorems are presented brief introductions to computer algebra and group theory come next structures of particular interest in combinatorics posets graphs codes latin squares and experimental designs follow the authors conclude with further discussion of the interaction between linear algebra and combinatorics features two new chapters on probability and posets numerous new illustrations exercises and problems more examples on current technology use a thorough focus on accuracy three appendices sets induction and proof techniques vectors and matrices and biographies with historical notes flexible use of maple and mathematica
