the number of books on nonparametric methodology is quite small as compared to say on design of experiments regression analysis multivariate analysis etc because of being perceived as less effective nonparametric methods are still the second choice actually it has been demonstrated time and again that they are useful we feel that there is still need for proper texts applications reference books on nonparametric methodology this book will introduce various types of data encountered in practice and suggest the appropriate nonparametric methods discuss their properties through null and non null distributions whenever possible and demonstrate the very minor loss in power and efficiency in the nonparametric method if any the book will cover almost all topics of current interest such as bootstrapping ranked set sampling techniques for censored data and bayesian analysis under nonparametric set ups
